PROFESSIONAL EXPERIENCE

Full Stack Developer

2025 – Present

Independent Contractor · Freelancer

- Founded and lead development of **Saudy Gestão**, a multi-tenant RIS/PACS SaaS for imaging clinics — own product built with a team, from scratch to production on GCP/Cloud Run.
- Built **Kira**, a management platform for aesthetics clinics with smart scheduling, patient records, financial control and automatic WhatsApp reminders — now with 7 registered clinics, over 60 appointments and 60 patients on the platform, and an active paying customer.
- Built **Lume** (Flutter) for CBTEA, bringing parents closer to the clinic in tracking patients with autism spectrum disorder, with facial recognition for generating session reports for insurance providers — currently in final deployment stage on the app stores. For the same client, also built a TEA-focused scheduling module in Nuxt.js.
- Built a web dashboard for a clinic in Recife, working on the frontend with React and React Query for better performance and data caching.

Full Stack Developer (side project)

2025 · 5 months

Heixo Tecnologias

- While still employed at Medilab, worked as a freelancer building a fintech application — an interesting technical challenge outside healthcare.
- Stack: Node.js · Next.js

TECH STACK

Backend

Node.js TypeScript
NestJS Express Java
REST WebSockets

EDUCATION

Postgraduate, Full Stack Development

Faculdade Descomplica Digital
2023 – 2024

Systems Analysis and Development

Universidade Estácio de Sá
2019 – 2021

Full Stack Developer

2022 – 2025

Medilab Sistemas

- Sole owner of the PACS↔RIS API integrator: received exams from third-party PACS systems in the DICOM standard, handling different layouts, and integrated them into the company's RIS.
- Implemented integrations with health insurance providers via REST and SOAP following TISS/TUSS standards, ensuring regulatory compliance.
- Developed new features and fixed bugs day-to-day across web modules for electronic health records and clinical workflows, using React.js and Node.js.
- Stack: Node.js · TypeScript · React.js · PostgreSQL · MySQL · DICOM

Development Intern

2021 – 2022

Medilab Sistemas

- Maintained and fixed bugs in the company's legacy systems, built with jQuery, JSP, Java, HTML, CSS and JavaScript.
- Built a real-time teleconsultation (video call) platform from scratch, using Node.js, jQuery, Java and the WebRTC technology, shipped to production.
- Toward the end of the internship, started working on medical API integrations under the DICOM standard, handling different layouts from third-party PACS systems for integration into the RIS.

FEATURED PROJECTS

Saudy Gestão

saudygestao.com.br

Multi-tenant SaaS for complete diagnostic imaging clinic management — RIS/PACS, scheduling, finance, inventory control and reports with DICOM integration.

- Scalable multi-tenant architecture with per-clinic isolation
- Integrated facial authentication for access control on sensitive reports
- Automated CI/CD with deployment to Google Cloud Run via GitHub Actions
- BI dashboard with production, revenue and schedule occupancy indicators

Next.js

Node.js

TypeScript

PostgreSQL

GCP

DICOM

CI/CD

Multi-tenant

LANGUAGES

Portuguese — Native

(advanced technical reading)

HIGHLIGHTS

- Full cycle: scope → production
- Founder of own SaaS (Saudy Gestão)
- Experience with high-complexity systems
- Advanced use of AI in the dev workflow
- Open to full-time and contract, remote or hybrid

Kira

kiraclinic.com.br ↗

Management platform for aesthetics and wellness clinics with smart scheduling, photographic patient records, financial control and automatic WhatsApp confirmations and reminders.

- 7 registered clinics, with over 60 appointments and 60 patients on the platform
- Active paying customer, validating the business model in production
- Scheduling with time slot management and automatic WhatsApp notifications
- Patient records with procedure history, photos and progress tracking per client
- Financial module with revenue, expense control and reports
